

GenAI Documentation

Name: Emerson Sanchez

If GenAI was used (keep each response as brief as possible):

Date Used: February 10th

Tool Disclosure: ChatGPT 5.2

Purpose of Use: GenAI was used to get the image to appear in the code. The purpose of the use was to get the right code to work and to make the process faster.

Summary of Interaction: Provided code to get the img img to appear on the code

Human Decision Point(s): I decided to take the generated AI code, but the rest of the code was done by me.

Integrity & Verification Note: Provided GenAI the code and referenced online material to confirm it works with JS.

Scope of GenAI Use: GenAI contributed to finding the code needed to make some of the important sections to work.

Limitations or Misfires: n/a

Summary of Process (Human + Tool)

- Used the code provided by GenAI; however the rest of the code remained the same and made by me.

Decision Points & Trade-offs

Describe one or two key decisions you made:

- Took the code directly from GenAI.

```
function preload() {  
  ultramarineslogo = loadImage("Assets/Ultramarines_logo.png");  
}
```

```
imageMode(CENTER);  
image(  
  ultramarineslogo,  
  width / 2,  
  height / 1.3,  
  ultramarineslogo.width,  
  ultramarineslogo.height,  
);
```

Report conversation

You said:

Can you provide the code needed to bring a png or img into p5.js?

ChatGPT said:

Yep! In p5.js you load images with `loadImage()` (usually in `preload()`) and then draw them with `image()`.

Here's the basic, correct pattern 📌

1 Basic example (recommended way)

```
let img;
```

```
function preload() {  
  img = loadImage("assets/myImage.png");  
}
```

```
function setup() {  
  createCanvas(600, 400);  
}
```

```
function draw() {  
  background(220);  
  image(img, 0, 0);  
}
```

Folder structure

project-folder/

|— index.html

|— sketch.js

└— assets/

 └— myImage.png

preload() ensures the image is fully loaded before setup() runs.

② Resize or position the image

```
image(img, 100, 50, 200, 150);
```

```
// image(img, x, y, width, height)
```

③ Load JPG, PNG, GIF, etc.

All work the same way:

```
img = loadImage("photo.jpg");
```

```
img = loadImage("sprite.png");
```

```
img = loadImage("animation.gif");
```

④ Load image without preload() (not ideal, but possible)

```
let img;
```

```
function setup() {
```

```
  createCanvas(600, 400);
```

```
  img = loadImage("myImage.png");
```

```
}
```

```
function draw() {  
  background(220);  
  if (img) {  
    image(img, 0, 0);  
  }  
}
```

This can cause flashing or delays, so `preload()` is preferred.

5 Common mistakes (watch out)

✗ Wrong path

```
loadImage("/myImage.png"); // often breaks
```

✓ Correct relative path

```
loadImage("assets/myImage.png");
```

✗ Running from local file system

If images don't load, run a local server:

```
python -m http.server
```

(or use VS Code Live Server)

6 Bonus: Center the image

```
imageMode(CENTER);
```

```
image(img, width / 2, height / 2);
```

If you want:

sprites / sprite sheets

image masking

pixel manipulation

responsive scaling

tell me what you're building and I'll tailor it 🔥
